I originally began working in HTML in early 2006. Most of my programming experience prior to that time was in games using the ancient "basic" programming language for the ZX Spectrum platform. Eventually I learned to program in C and C++. These days I write the majority of my programs in PHP and Javascript. I have also recently begun using HTML 5 with a handful of components written in SVG. I use a variety of other "web apps" (social networking sites, RSS readers etc) and I have recently began to develop my own. My first b7e8fdf5c8

Image Converter is a free software application that allows you to convert a variety of file types in no time at all. You can change an image format or convert between similar file formats. The simplicity of the graphical interface matches what Image Converter does, in the sense you can quickly browse folders, select your image file and, by clicking on 'convert', start to convert it. Firstly, it's important to note that it can directly deal with 8-bit, 16-bit and 24-bit BMP files. Additionally, you can also use it to work with Microsoft JPG, PNG and TIFF files, along with various other image formats, such as GIF, PDF, DIB, DjVu and so on. The application comes with a set of options that can be quickly set up, and thanks to its 'more than one output options' functionality, you can convert a single image or a group of related images in one go. Alongside the conversion, you can zoom in and out of the image, as well as specify

its dimensions. Furthermore, you can set the image's position, rotation and color depth. In conclusion, Image Converter is a simple utility you can use to convert your pictures into numerous formats. The free application is simple to use and pretty resource-friendly, and it can take care of most file conversions by itself. The interface is colorful and attractive, with a good standard of performance.
